- have lots of trees
- provide a canopy for plants and wildlife

Examples:

- New Forest in the UK
- Congo rainforest in Africa

Mountains:

- are high areas, rising more than 600m
- are often found in groups

Examples:

- Ben Nevis in the UK
- Mount Everest in Asia

Deserts:

- have extreme temperatures
- have low rainfall

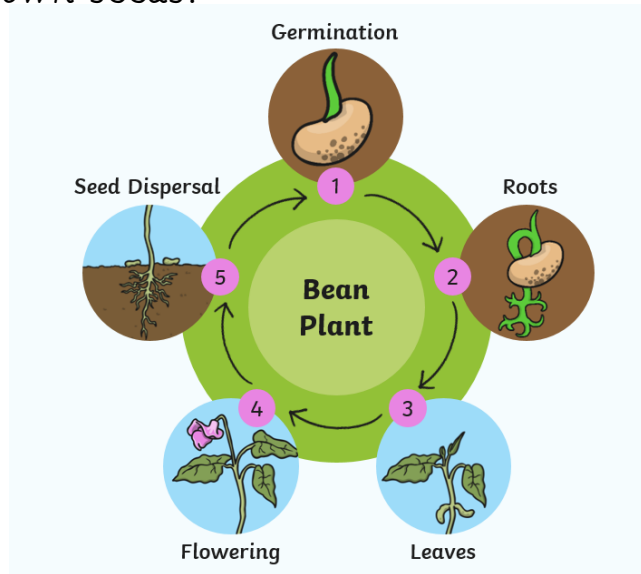

Examples:

- Sahara in Africa
- Antarctica in the Antarctic

Where the Wild Things Are Key Fact Sheet - Science

Plants grow with the right temperature, location, air and water. Plants grow from seeds and bulbs.

Plants that grow from a seed reproduce by making their own seeds.

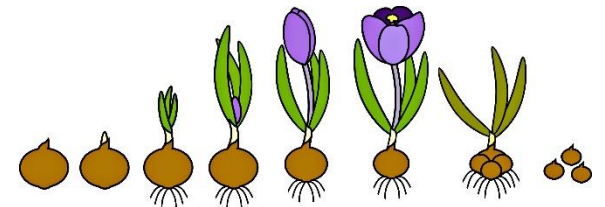

A seed will germinate, grow roots and become a seedling. The stem will break through the soil (sprouting), where leaves will begin to unfold. Soon after, a bud will appear, then a flower and finally the fruit (new seeds are inside the fruit). The cycle goes on.

Key vocabulary:

germination	The development of a plant from a seed.
ruler	A straight strip of usually a hard material, used to measure and draw straight lines.
temperature	The measure of hotness or coldness.
diagram	A simplified drawing to show the appearance, structure or workings of something.
growth	The process of increasing in size.
observations	The action or process of closely watching something (monitoring).

A bulb is a plant bud that begins to grow underground. The stem will break through the soil (sprouting), where leaves will begin to unfold and buds appear. When it has finished flowering, the leaves die and the bulb stays in the ground, ready to grow again.

Where the Wild Things Are Fact Sheet - RE

Islam

Theme:

Hajj

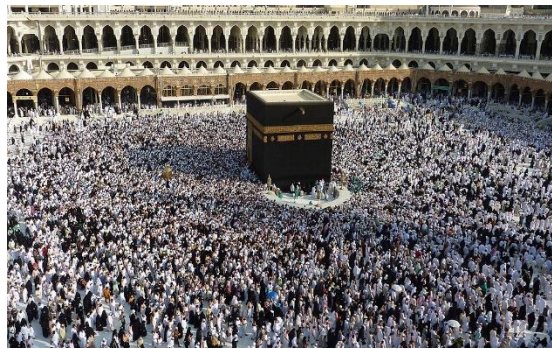

Key Question:

Does completing Hajj make a person a better Muslim?

Muslims believe Hajj offers a chance to wipe clean past sins and start again. It also shows commitment to Allah.
